

ZERO RALLY 2011

June 7 - 9, 2011, ZERO and the Norwegian Automobile Sport Federation host Zero Rally 2011. We proudly invite you to participate in this event, a rally for battery electric, plug-in hybrid, bio and hydrogen powered vehicles.

This rally will show the public and decision makers that renewable energy vehicles are roadworthy alternatives. Further we want to inspire manufacturers, researchers, students and others to continue improving this technology.

The Event

Arranged under the supervision of the FIA representative Norwegian Automobile-Sport Federation, the 600+ km rally starts in Hamar on June 7 and finishes two days later in Oslo. This event is a continuation of the very successful Viking Rally 2009 and Zero Rally 2010.

The route runs through the scenic landscape of Eastern Norway, through mountainous and forested landscapes. Making the rally perfectly suited for testing the performance of the vehicles and the skills of the teams. The participants will be

challenged through several special stages along the route: Testing manoeuvrability, fuel economy, acceleration and other vital attributes.

Participation

The sponsored participation fee is 15 000 NOK for businesses and organisations, and 5 000 NOK for private participants in the Pro and Touring Class. Participation fee in the shorter city rally classes is 1500 NOK for private participants and 3000 NOK for businesses and organisations. Fees do not include accommodation and meals.

The rally is open for all roadworthy hydrogen, electric, bio powered and plug in hybrid vehicles. Unfortunately we can not accept larger vehicles like buses and trucks. All vehicles will have to pass an on-site basic safety inspection in order to get a license for the rally.

Registration opens on www.zerorally.org in February, with a deadline for registration on May 1st. For further details about the rally, please visit our web page.

HAMAR - OSLO JUNE 7-9

Classes and Prizes

City Class: Battery electric, hydrogen cars

Touring class: Plug in hybrids, battery electric, hydrogen and bio powered cars

Pro class: Battery electric, bio powered cars

Most Efficient Vehicle price

Most Innovative Vehicle price
